Homebuyers nowadays are looking for a combination of luxury and comfort, which enables them to live a perfectly balanced and blissful life. They are also looking for projects that provide sustainable infrastructure, ample amenities and world-class safety features. That is the genesis of Wave City's latest project, Eligo.

Eligo is based on modern contemporary architectural trends and sustainable development for the new-age aspirational people seeking a sophisticated and balanced lifestyle. In the age of aspirational and opulent living, The project is a perfect amalgamation of luxury and comfort amidst the lap of nature.

Eligo offers the concept of 'sustainable living' that is preferred mainly by millennials looking for premium residential space. The concept of sustainable living is associated with green living, which aims to balance the protection and preservation of the earth's natural resources, biodiversity, and habitats within the community.

Eligo is a premium residential project that has mid-rise (eight-floor), residential apartments consisting of 3 BHK+3T amenity-rich homes with an expansive view of green parks spread over a huge landscape.

It has been designed by Philippines-based 'Palafox Associates', a multi-disciplinary firm founded by renowned architect and urban planner Felino 'Jun' A Palafox Jr. The project has a touch of modern yet contemporary architectural designs.

The premium residences include a clubhouse comprising a swimming pool and a well-equipped gym, restaurant, dedicated yoga space, etc., for various recreational activities. Other key features include a dedicated kid's play area, a separate area for indoor and outdoor games, and a multi-purpose hall.

Equipped with best-in-class security and surveillance system, residences in each tower and floor are equipped with video door phones with a dedicated entrance lobby and point-on access control.

With spacious structures, Eligo has a premium living area with a seven-feet living room balcony, air conditioning in all rooms, and a modular kitchen with well-designed cabinets that provide smart usage of the kitchen space. The residences also feature UPVC sliding doors with wire mesh provision. The interiors of the residences are a perfect balance of modern and contemporary features with a blend of nature, as the name suggests.

Having green lungs and sustainable practices in residential spaces being the new normal in premium residences, Eligo strikes the perfect balance between nature and nurture. Green spaces surround each tower with a captivating environment of luxury and peace. An abundant open area allows natural light, ventilation, and the most stunning cityscape view from these homes.

Other smart features are motion light sensors, solar power, smart energy metering, PNG connection, etc., with a sense of smart living. From uninterrupted power and water supply to a waste disposable system and Jio fibre connectivity, Eligo promises a luxurious urban lifestyle that makes it stand out. 'Eligo' is well connected within just five minutes to the nearest metro station. It's also adjacent to the Eastern Peripheral Expressway on one side and Akshardham Temple in the heart of the Capital on the other. Having proximity to nearby Ghaziabad and Noida, Eligo project is just a 15-minute drive away from the location.
